🏠 Gurugram, India

🌐 iamperfpro

Overview

Ph.D. in Computer Science with 12+ years of expertise in building and scaling digital solutions. Experienced Product Manager with a proven record of driving product roadmaps, prioritizing features, and delivering measurable business value. Skilled in translating complex technical concepts into clear product strategies, collaborating with cross-functional teams, and aligning product outcomes with client objectives. Strong background in cloud systems, APIs, and distributed platforms, combined with leadership experience in academic and corporate settings.

Professional Experience

Technical Product Manager – Systems and Platform

Sept 2025 – Present

StatusNeo Technology Consulting Private Limited, Gurugram, India

- **[Major Achievement]** Owned a multi-tenant web platform used by multiple teams to model staffing, budgets, and commercial inputs, improving consistency and scalability of workflows across a distributed, API-driven architecture.
- **[Major Achievement]** Prioritized the product backlog based on technical dependencies, system risk, and platform impact, translating requirements into clear, well-scoped user stories with appropriate sizing to enable predictable feature delivery.
- **[Major Achievement]** Defined and owned platform-level product requirements, including API contracts, data schemas, and cross-service workflows consumed by multiple upstream and downstream systems, reducing rework by 25%.
- Performed system-level functional validation to ensure correct end-to-end platform behavior, identifying breaking changes, isolating failing APIs, and tracing issues to upstream or downstream service dependencies.
- Owned non-functional requirements for platform services (performance, scalability, reliability, observability), leading technical bug triage, determining root causes across service boundaries, and assigning ownership for fixes.
- Ensured user Quality of Experience (QoE) by validating new feature releases against existing platform workflows, preventing functional and performance regressions, and driving continuous improvements based on production performance metrics and user feedback.
- Acted as the technical decision owner for the platform, gathering requirements from stakeholders, explaining system behavior and constraints, and making go/no-go decisions on feature feasibility, scope changes, and delivery timelines.
- Monitored and analyzed API performance characteristics, including response latency, throughput, and error rates, to diagnose performance regressions and guide prioritization of optimization and remediation efforts.

Technical Product Owner (Platform & Performance)

Jan 2020 – May 2025

University of New Hampshire, Computer Science, Durham, NH, USA

- **[Major Achievement]** Led the design of distributed client-server systems to evaluate HTTP/3 performance under real-world latency conditions; results informed industry best practices and were published at IEEE ICIN 2022.
- **[Major Achievement]** Defined requirements and roadmap for benchmarking platform that compared HTTP/2 and HTTP/3, enabling stakeholders to assess scalability and reliability under simulated traffic loads.
- **[Major Achievement]** Owned end-to-end performance testing for multiple production-grade web platforms, achieving 25% faster load times and 85% improved interactivity; findings led to three peer-reviewed publications: MeditCom 2024, CITS 2024, ICCCN 2024.
- Drove adoption of new prioritization strategies (EPS-based) for HTTP/3 resource scheduling, improving efficiency and influencing team-level CI/CD integration practices.
- Developed shell-based monitoring scripts to capture performance parameters such as latency, throughput, and packet loss in distributed systems.
- Collected and analyzed packet captures to observe transport-level behavior and identify throughput degradation.
- Generated performance graphs and analyses to identify bottlenecks and guide system-level performance improvements.

Production Engineer

May 2019 - Aug 2019

Juniper Networks, Westford, MA, USA

- Automated diagnostics and performance monitoring for network devices by developing YAML-based HealthBot playbooks, reducing manual troubleshooting time by 30%.
- Developed Python scripts to analyze logs and identify root causes; integrated them with telemetry streams (NETCONF, SNMP, Junos Telemetry Interface) to enable real-time issue detection and both reactive and proactive alerts.

Software Engineer - Digital Health

June 2017 – July 2018

RP Stone Clinic Private Limited, Panipat, Haryana, India

- Led the development of a cashless payment portal to streamline hospital billing processes.
- Developed a Kidney Stone Treatment Evaluator, enhancing patient engagement and clinical decision-making.

Software Engineer

June 2016 - Aug 2016

Blue Cross Blue Shield of Massachusetts, Quincy, MA, USA

- Automated data archiving workflows using Linux shell scripts to transfer Oracle monthly partitions into a historical database; reduced manual effort and improved long-term data accessibility by 50%.
- Designed and executed QA test plans for EDIFECs EDI X12 transaction pipelines, ensuring data integrity and compliance with healthcare industry standards.

Software Engineer

Oct 2012 – Dec 2014

RP Stone Clinic Private Limited, Panipat, Haryana, India

- Led enhancements to a cloud-hosted Hospital Information System by defining requirements and integrating modules such as patient record management and discharge summary, improving operational efficiency by 30% and streamlining clinical workflows.

Publications

- Published peer-reviewed research in distributed systems and networking, with a focus on HTTP/3 performance and Quality of Experience (QoE), including IEEE conferences (ICIN, MeditCom, CITS, ICCCN).
- Full publication list and citations available on Google Scholar.

Technical Knowledge

Product Management:	Agile/Scrum, Product Roadmaps, Backlog Prioritization
Strategy & Collaboration:	Stakeholder Alignment, Requirements Gathering, UX/UI
Tools:	Jira, Confluence, Miro, Azure DevOps, Trello
Technical Fluency:	APIs, Cloud Platforms (AWS, Azure), Data-Driven Decision Making, SQL/NoSQL Databases
DevOps & CI/CD:	Git, Docker, YAML, Linux, Azure, AWS, Shell Scripting
Programming/Markup Languages:	Java, Python, HTML, CSS

Education

University of New Hampshire, Durham, NH, USA

Aug 2018 – May 2025

Ph.D. in Computer Science (Topic: Improving Quality of Experience with HTTP/3)

Boston University, Boston, MA, USA

Jan 2015 – Jan 2017

Master of Science in Computer Science

HULT International Business School, London, UK

Sep 2011 – Aug 2012

Master of International Business

Maharshi Dayanand University, Rohtak, India

Aug 2007 – May 2011

Bachelor of Technology in Computer Science & Engineering
